

### Argos for BMW QUICKSTART Guide:

Once connected, enter pairing mode as described below (very long push of small button) – you should hear 2 faint beeps. Once in pairing mode, use your phone and search for available devices. Once your phone finds your Argos unit, select it and enter passkey 1234.

Note that the default volume is very low when you first connect the Argos unit, once adjusted to a comfortable level for you it will remain that way even when the car is turned off.

If you have no incoming audio you may need to install an SES Jumper plug (BMW PN 84110018038); If you have no outgoing audio you may need to install a BMW factory mic (BMW PN 84316938762). Both of which are available from your dealer or from us.

Any further questions about operation or installation can be directed to us at [info@eiskits.com](mailto:info@eiskits.com) or by phone at 404-835-7457
